## PEAT FREE

One of the key differences between peat-based and peat-free composts is the look and feel.

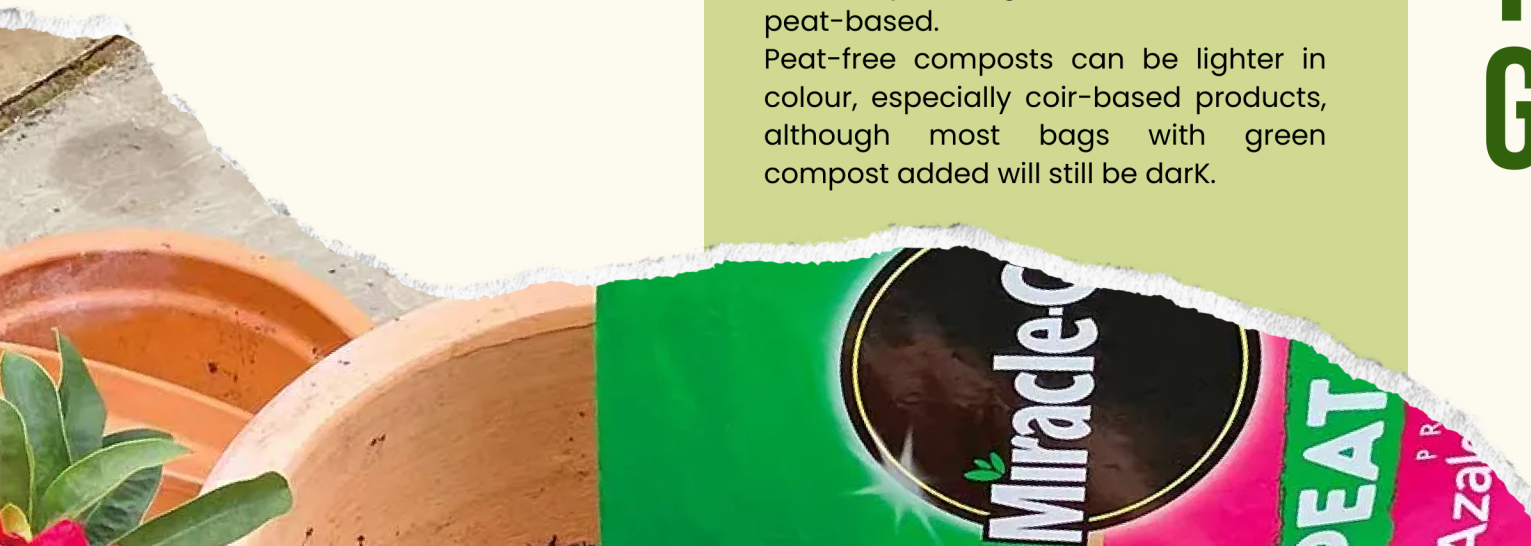

Peat-free alternatives tend to have a more open, coarse, and fibrous structure making the mix feel slightly less fine in texture. Compost with natural wood-based materials such as wood fibre and composted bark look and feel more 'bitty', but these pieces of wood-based materials mustn't be removed as they are a vital part of the ingredients that go into making peat-free compost as good, if not better, than peat-based.

Peat-free composts can be lighter in colour, especially coir-based products, although most bags with green compost added will still be dark.

WELCOME

# TO LOVE THE GARDEN

# ABOUT US.

We are passionate about creating a greener footprint, together. Our mission is to help everyone create a green oasis making a difference to our planet and our wellbeing.

The act of becoming carbon neutral not only benefits the planet but also helps gardeners and supply chain partners achieve their green goals.
